

**Important note** (see also operating instruction chapter 2.2):

*“The safety laser scanner is suitable for the following applications:*

- **Hazardous area protection**
- **Mobile hazardous area protection (protection of automated guided vehicles)**
- **Use in industrial environments (indoors and outdoors).”**

The safety function was assessed with regard to the conditions of industrial environments only, such as:

- **operation in areas where only instructed adult persons are present**
- **areas with restricted access, i.e. no public areas**
- **environments where EMC conditions are comparable to indoor industrial areas**
- **environments where mechanical influences and airborne pollution are comparable to industrial indoor areas**

The safety standards ISO EN 13849-1 and IEC 62061 determine the addressed application sector in which the outdoorScan3 can be used.

*Operation in sectors governed by other standards, such as ISO 25119 (agriculture) or ISO 26262 (Road vehicles) is **not covered by the intended use**, requires an additional risk assessment and a dedicated analysis of the application sector specific requirements.*
